

# 10 ways to manage respiratory symptoms at home

**If you have fever, cough, or shortness of breath, call your healthcare provider. They may tell you to manage your care from home. Follow these tips:**

- 1. Stay home** from work, school, and away from other public places. If you must go out, avoid using any kind of public transportation, ridesharing, or taxis.

- 2. Monitor your symptoms** carefully. If your symptoms get worse, call your healthcare provider immediately.

- 3. Get rest and stay hydrated.**

Drink lots of water or mix half apple juice and half water to hydrate.

- 4.** If you have a medical appointment, **call the healthcare provider** ahead of time and tell them that you have or may have COVID-19.

- 5.** For medical emergencies, call 911 and **notify the dispatch personnel** that you have or may have COVID-19.

- 6. Cover your cough.**

Cough into your elbow. If use a tissue then throw away immediately after use and wash your hands.

- 7. Wash your hands often** with soap and water for at least 20 seconds or clean your hands with an alcohol-based hand sanitizer that contains at least 60% alcohol.

- 8.** As much as possible, **stay** in a specific room and **away from other people** in your home. Also, you should use a separate bathroom, if available. If you need to be around other people in or outside of the home, wear a facemask.

- 9. Avoid sharing personal items** with other people in your household, like dishes, towels, and bedding.

- 10. Clean all surfaces** that are touched often, like counters, tabletops, and doorknobs. Use household cleaning sprays or wipes according to the label instructions.
